

Autosegmental-Metrical Theory I

Amalia Arvaniti

6 September, 11:00-12:30

In this lecture we will cover basic principles of the autosegmental metrical (AM) model of intonational phonology. Topics will include:

- Relationship between F0, intonation, and prosody
- Linguistics and paralinguistic uses of pitch
- The primitives of intonation in the AM system
- Types of tones and their phonological association
- How is intonation represented phonologically and how is it realized phonetically?
- What is the relationship between phonological tones and tonal targets?
- Criteria for positing tones and targets
