

## **Prosody and Syntax**

*Mariapaola D'Imperio*

8 September, 16:30-18:30

In this lecture I will provide an overview of the contribution of research within the AM framework to the present knowledge of prosodic structure, prosodic constituency and its implementation, with a special focus on syntactic constraints on phrasing production and the processing of ambiguous syntactic structures. The goal of this course is to prepare participants for conducting experimental investigations of questions related to the prosody/syntax interface. Topics will include:

- The notion of prosodic structure, prosodic constituency and the prosodic hierarchy
- Tonal approach to constituent structure
- Phonetic and phonological cues to prosodic structure
- Notion of variability in the production of phrasing cues
- Production studies on syntax/phrasing effects
- Studies on syntactic disambiguation and processing
